

### **1. How to see the Status of the Jobs?**

*Give the command 'ST'*

### **2. How to filter a job by Owner id?**

*OWNER \* or OWNER - Shows the jobs by all the owners*

*OWNER MA%%%KS - Shows all the jobs with owner starting with 'MA' and ending with 'KS'*

*OWNER MATE\* - Shows all the jobs with owner starting with 'MATE' followed by anything.*

### **3. How to view a SDSF user/Owner?**

*Issue a line command 'WHO' to get the information of the user.*

### **4. How to write the content of the SPOOL (SDSF) to a dataset?**

*Issue a line command 'XDC' against the Job you want to copy in a dataset. You need to give the name of the dataset where you want to store the information.*

### **5. How to filter a job by Prefix?**

*PRE \* or PRE - Shows all the jobs*

*PRE JOB123\* - Shows all the jobs starting with JOB123*

*PRE JO%%23 - Shows all the jobs by starting with JO and ending with 23*

### **6. How to Browse/view a particular Job?**

*In the line command, type a question mark(?) against the job name which you want to browse and it will show various areas which you can browse like -*

*a) JESMSG LG*

*b) JESJCL*

*c) SYS PRINT*

*d) SYS OUT, SYS UT2 etc*

*Suppose you want to select 'JESMSG LG' then issue a line command 'S' to select this.*

### **7. How to run a JCL in SDSF?**

*Issue a line command 'SJ' against the job you wish to run. You can edit the JCL here and submit it. Please note that editing of JCL here does not save the changes in the member where your JCL is present so you cannot physical SAVE the changes but only a logical editing can be done.*

### **8. How to go to a particular line? In other words, how can we locate a Line number?**

*Suppose i want to locate a line number 111, and then issue a command 'LOCATE 111'*
